

Task 1: Digital Literacy Infographic

For this task, I designed an infographic on digital literacy using Canva, which is an online platform used to create designs with various templates. The main objective of this infographic is to spread awareness among students about the importance of digital literacy in today's world. In this infographic, I discussed some of the key points of digital literacy, such as online safety and security, digital tools, professional online presence, email etiquette, and digital usage. All these key points are discussed in such a manner that it is easy to understand.

During this task, I found it interesting to write key points in such a manner that it can be accommodated in a single-page infographic. This task helped me in improving my skills in presenting key points in an impactful way. However, during this task, I found it challenging to accommodate too much text in an infographic. Overall, this task helped me in understanding how visual communication can be used to spread awareness among other people.

Task 2: Digital Portfolio

In this task, I have developed my profiles on GitHub, LinkedIn, and Kaggle to build my digital portfolio. These sites are used for different purposes in building my digital portfolio. On GitHub, I have stored my coding projects, which are used to show my coding skills. On LinkedIn, I have added my educational details and will use it to build my professional network. I will also explore internship opportunities through this site. On Kaggle, I can learn data science concepts and solve problems.

This task has taught me the importance of maintaining a clean digital identity. I learned that an updated digital identity can provide better opportunities in the future. In the coming four years, I will upload my projects on GitHub, build my professional network through LinkedIn, and improve my problem-solving skills through Kaggle. This task is useful in building my professional career.

Task 3: Coding & Collaboration Platforms (150-200 words)

For this task, I had to explore coding and collaboration platforms to enhance my technical and practical skills. For the coding part, I signed up for a platform called HackerRank and attempted a beginner-level problem called "Solve Me First." This helped me understand basic programming logic and coding platforms. This was a good starting point for enhancing my problem-solving abilities.

For the collaboration part, I created a Google Form titled "Digital Literacy Awareness Quiz" with five questions, including multiple-choice and short answer questions. I also had a look at the

responses in Google Sheets. This task helped me understand how digital tools can be used for academic and collaborative purposes.

From this task, I learned that platforms like HackerRank are helpful in developing coding skills, and Google Forms is helpful in collecting and analyzing information in an efficient manner. These tools will be helpful for me in my academic journey as I will be able to enhance my technical knowledge, communication, and collaboration skills.

Task 4: Email & Etiquette (150-200 words)

In this task, I learned about the concept of professional communication through the writing of emails and social media etiquette. While writing two emails, one requesting the extension of the deadline to submit the assignments and the other applying for the internship, I learned the importance of proper structure in the email. This includes the subject line, greeting, body, and closing. This has enabled me to understand the significance of the tone and clarity of the message in the email.

Additionally, I created a list of do's and don'ts for the proper use of social media. This includes the importance of 'thinking before posting,' the need to create a professional social media profile, avoiding the sharing of sensitive information, and avoiding harmful activities online. This is crucial in maintaining a positive online presence.

The most important thing that I learned through the completion of this task is that proper communication is essential to avoid misunderstandings. For example, if the tone of the email is not proper, it may create a bad impression.

Task 5: Cybercrime Awareness (150-200 words)

For this task, I focused on cybercrime and studied the real-life scenario of UPI fraud. I came to know how cybercriminals are utilizing various methods such as fake job offers, phishing links, and demand for money to deceive users and obtain sensitive information. Through the case study, I realized that anyone can become a victim of cybercrime if they are not careful when using digital technologies.

During my research on this topic, I was amazed at the prevalence of such scams and the way cybercriminals are manipulating people by building trust. I also developed a prevention

checklist that includes various safety measures such as avoiding the sharing of OTP and UPI PIN, avoiding suspicious links, and verifying online transactions.

This task has made me more aware of the risks and the significance of cybersecurity. I have realized that I need to be more careful when clicking on any link or responding to any unknown message. I believe that this activity has made me aware of the safety measures that I need to take and how I can spread awareness among others.
